

CARE COORDINATION

Care management is the service that helps you and your family get the services and supports you need. Care management is provided by Care Managers who work for Care Coordination Organizations (CCOs), which are organizations that were formed by developmental disability service providers and are staffed by Care Managers with training and experience in the field of developmental disabilities. Your Care Manager will coordinate a variety of healthcare, wellness and developmental disabilities services to meet your needs.

You will need to choose the CCO that you want from the list of CCOs that provide services in your region.

Your CCO will help you with the OPWDD eligibility determination process, the Level of Care Eligibility Determination process and the process of enrolling in Medicaid.

Once you have enrolled in your CCO, you will choose the care management plan that best meets your needs.
